NA Not available.

¹ Net pounds per box: oranges in California-80, Florida-90, Texas-85; grapefruit in California and Texas-80, Florida-85; lemons-80; and tangerines and mandarins in California-80, Florida-95.

² Navel and miscellaneous varieties in California. Early and midseason non-Valencia (including Navel) varieties in Florida and Texas.

³ Estimates carried forward from May forecast.

⁴ In 2016-2017, includes Fallglo, Sunburst, Royal, and Honey tangerine varieties and tangelos. Beginning in 2017-2018, includes all certified varieties of tangerines and tangelos.

⁵ Fallglo and Sunburst varieties.

⁶ Includes tangelos and tangors in California.

All Oranges 71.4 Million Boxes

The 2018-2019 Florida all orange forecast released today by the USDA Agricultural Statistics Board is 71.4 million boxes, down 1.00 million boxes from the May forecast. The total includes of 30.4 million boxes of non-Valencia oranges (early, midseason, and Navel varieties) and 41.0 million boxes of Valencia oranges.

Non-Valencia Oranges 30.4 Million Boxes

The forecast of non-Valencia production is unchanged at 30.4 million boxes. Harvest is complete for the included varieties. The Navel forecast, included in the non-Valencia portion of the forecast, is 750,000 boxes, 2 percent of the non-Valencia total.

Valencia Oranges 41.0 Million Boxes

The forecast of Valencia production is down 1.00 million boxes to 41.0 million boxes. The Row Count survey conducted May 29-30, 2019 showed 96 percent of the Valencia rows are harvested. Estimated utilization to June 1, including an allocation for other use, is 39.3 million boxes.

All Grapefruit 4.51 Million Boxes

The forecast of all grapefruit production is lowered 70,000 boxes to 4.51 million boxes. The white grapefruit forecast is reduced 10,000 boxes to 770,000 boxes. The red grapefruit forecast is lowered 60,000 boxes and is now 3.74 million boxes. Estimated utilization to June 1, with an allocation for non-certified use, of white grapefruit is 770,000 boxes and of red grapefruit is 3.74 million boxes. The Row Count survey conducted May 29-30, 2019, indicated harvest is complete for these varieties.

Tangerines and Tangelos 990,000 Boxes

The forecast for the tangerine and tangelo production is lowered 10,000 boxes to 990,000 boxes. This production level is 32 percent more than last season's hurricane-affected production of 750,000 boxes. This forecast number includes all certified tangerine and tangelo varieties. Estimated utilization to June 1, with an allocation for non-certified use is 990,000 boxes. Harvest is complete for these varieties.

Reliability

To assist users in evaluating the reliability of the June 1 Florida production forecasts, the "Root Mean Square Error," a statistical measure based on past performance, is computed. The deviation between the June 1 production forecast and the final estimate is expressed as a percentage of the final estimate. The average of squared percentage deviations for the latest 20-year period is computed. The square root of the average becomes statistically the "Root Mean Square Error." Probability statements can be made concerning expected differences in the current forecast relative to the final end-of-season estimate, assuming that factors affecting this year's forecast are not different from those influencing recent years.

The "Root Mean Square Error" for the June 1 Florida all orange production forecast is 1.1 percent. If you exclude the three abnormal production seasons (three hurricane seasons), the "Root Mean Square Error" is 0.9 percent. This means chances are 2 out of 3 that the current all orange production forecast will not be above or below the final estimates by more than 1.1 percent, 0.9 percent excluding abnormal seasons. Chances are 9 out of 10 (90 percent confidence level) that the difference will not exceed 2.0 percent, 1.5 percent when excluding abnormal seasons.

Changes between the June 1 Florida all orange forecast and the final estimates during the past 20 years have averaged 1.42 million boxes (1.26 million, excluding abnormal seasons), ranging from 0.10 million boxes to 5.3 million boxes including abnormal seasons, (0.10 to 3.0 million boxes excluding abnormal seasons). The June 1 forecast for all oranges has been below the final estimate 13 times, above 7 times, (below 12 times and above 5 times, excluding abnormal seasons). The difference does not imply that the June 1 forecasts this year are likely to understate or overstate final production.

Maturity

Regular bloom fruit samples were collected from groves on established routes May 29-30, 2019 in Florida's five major citrus producing areas and tested May 31, 2019.

Unadjusted Maturity Tests – Florida: June 1, 2017-2018 and 2018-2019

[Averages of regular bloom fruit from sample groves. Juice and solids per box are unadjusted and not comparable to juice processing plant test results. Samples were run through an FMC 091B machine using pneumatic pressure. This machine utilizes a 0.025 short strainer and a 1.00 inch orifice tube for the 3 inch cup and a 1.25 inch orifice tube for the 4 inch and 5 inch cups]
